- General** – The dashboard appears on logon. The activity and announcement areas work in a similar way to Skype messaging. Please refer to Skype messaging to determine behaviour. All boxes default to the current day. Links enable to get the user to the target application and context quickly.
- The link provides a tool tip with a truncated version of the post or annotation made at that target.
 - The default is personal activity, but can be filtered to all members or particular ones.
 - The activity boxes are collapsible so that the expanded one takes up the available space.
 - Activity boxes provide information about the type of activity, the tool in which the activity took place, the context with the tool, the item (object or document (image, pdf, etc) record id (as a link to that item), a link to the context, and the user who performed the activity)
 - Works exactly like Skype messaging.
 - To do that have either come from the forum or direct from the project lead.
 - Sortable by clicking on title
 - Default is to send messages to all – can send messages to one or more users by selecting (CTRL-Key) from a list. Default is project team
