

# Recommendations API Release Notes

- 1.2.0
- 1.1.1
- 1.1.0

## 1.2.0

Release Date: 06 Jan 2015

- MON-6: Added explain parameter to both recommend calls
- DSP-568: Fixing a few bugs when article ids are URLs

## 1.1.1

Release Date: 11 Dec 2014

- Fixing ClassCastException when Solr's id field is not String
- DSP-513: Added timers to all controller methods

## 1.1.0

Release Date: 08 Dec 2014

- DSP-448 - spring.profile.active configuration property removed, fixing logging dependencies, adding default cassandra port
- DSP-402 - max API parameter renamed to count
- DSP-415 - recency, sort and count parameters are not required anymore
- DSP-404 - new deploy parameter com.ontotext.recommend.errorOnReadingMissingArticle for recommendations-web
- DSP-460 - the user action call now accepts optional timestamp parameter (POST or PUT /user)
- DSP-461 - additional documentation on weights
- DSP-474 - adjusting the Solr schema to play nicely with Solr-connectors
- DSP-482 - bugfix: requesting recommendations for nonexistent user now returns HTTP 400 (instead of 500, as it was before)
- FRR-202 - null keyphrases are no longer accepted when adding articles
