

# Upgrade to a newer version

## The 5 steps guide

Basically speaking:

1. Pull the new artifacts from <http://maven.ontotext.com/content/repositories/publishing-releases>
2. Stop your Tomcat (or other webapp container) and replace the `recommendations-web.war` (also delete the unpacked war directory)
3. Go to your `solr.home` (see where you set it [here](#)) and delete everything except for the `data` directory
4. Unpack `recommendations-solr-core.zip` in `solr.home`
5. Start Tomcat
